

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. – 5. (Cancelled)
6. (Currently amended) A printer fluid dispenser according to claim 511, wherein the resilient member comprises a spring.
7. (Original) A printer fluid dispenser according to claim 6, wherein the first and second portions of the housing comprise a base and plunger.
8. (Original) A printer fluid dispenser according to claim 7, wherein the spring is located between the deformable container and the plunger.
9. (Original) A printer fluid dispenser according to claim 8, wherein the deformable container comprises a membrane.
10. (Original) A printing fluid dispenser including:
 - a housing comprising a base and a plunger;
 - a deformable container located within the housing for storing printing fluid;
 - an outlet coupled to the deformable container and arranged to convey the printing fluid to a point external to the housing; and
 - a spring located between the deformable container and the plunger having characteristics selected to limit pressure in the deformable container to a predetermined level in use; wherein
 - in use, bringing the plunger towards the base causes compression of the deformable container between the spring and the base and egress of the printing fluid through the outlet.
11. (New) A printing fluid dispenser including:
 - a housing comprising first and second portions movable relative to each other;
 - a deformable container of printing fluid within the housing, the container having an outlet arranged to convey the printing fluid to a point external to the housing such that bringing the first and second portions towards each other causes egress of the printing fluid through the outlet; and,
 - a resilient member disposed between the deformable container and the housing;
 - wherein,
 - the resilient member has characteristics selected to limit pressure in the deformable container to a predetermined level in use.
